Water project

Mission / Main focus

Water focused “non-profit” that will positively impact our own local community and possibly even others by different means.

Includes dealing with issues for water such as:

- Water availability
- Contamination in water

WE can help by:

- Raising awareness
- Raising money for the cause
- Creating certain projects that can help the community in unique ways.

Link

Project

Microplastics data is unavailable in many parts of the world. (including the US.) I want us to try to make this data available everywhere.

* The main project will be to create a database of the microplastics in our city.

We will test where it comes from if possible.

We might even compare already treated water/non treated water.

We will then also present this data to the city.

Problem

Solution Details

Main Idea

Design a low cost microplastics identifier that can be used to see microplastics in a quantifiable way.

Then create a database that showcases the data for the world to see. (visually appealing)

Two Uses:

Used for tap water, to see everyone's microplastics percentage in drinking water.

Used for water streams, to see industrial runoff/microplastics before treatment.

← **Methods**

Roles *

Engineers

Work on the certain project at hand, while creating innovative solutions for complicated problems.

Coders

Work on the certain coding part of the project, as well as maintain the organization website. (innovate as well ofc)

Social media manager

Handle the public image of our organization through social media and many different other ways. Find new ways to push a certain idea/ raise awareness for the topic.

Public Relations manager

Handle talking to other people including other organizations.
Pull in funding for projects and awareness.
Find mentors for projects (if necessary and helpful)

*yes I ran out of images to put

Social media & public relations:

Will be working together for talking to certain people through social media and **finding events** that we can go to in order to raise awareness for water availability and get donations.

Helps us get in touch with other organizations that might be working on the same thing

First Week's Agenda

Engineers

Work on the first ideas of the product, create an engineering design matrix that helps us decide what qualities to put into the product. (cad next week or the week after)

Coders

Get started on the website for the organization. (make sure names/titles can be changed)

yes vibecoding is allowed

Social Media Manager

Do some research on how other nonprofits post, what ideas they push and how they do it.

Work with the public relations manager to find funding methods for the social media.

Public Relations Manager

Research different funding methods and other organizations that are working on the same/similar topic.

Find some events that we can go to possibly get donations. → for this we will need some donations in the first place! (to set up a stand, pass out items, etc)

it can be done later just keep an eye out!

Opportunities

- Work on a project that supports your community
- Earn more extracurricular experience for college (if you're in high school)
- Build a project you can proudly add to your resume to show off skills

Additional info:

- Meetings will always be on Monday (weekly and virtual). Time is flexible for now, when school starts it'll be at 6:30. (Exceptions are expected ofc)
- We can decide the name for the organization around next week.
(hit me up with ideas)
- Filing for 501c3 will be only done if necessary for grants or any other reason, or else the main focus is to help our community.
